

IoT Laboratory, ICWAR

IoT Laboratory Dashboard: web enabled soil monitoring data dashboard

Products developed at IoT Laboratory:

Multi-Channel IoT enabled soil moisture measurement system v1 & v2

Description: The IoT Lab represents the pressing research requirement for Internet enabled Technologies in smart water resource management. The laboratory activities are related to design and implementation of connected systems of smart things and cyber physical systems, involving advanced data acquisition & decision management systems for water resource management. The main research activity the Lab of the lab this year, is the development of portable and field deployable soil moisture measurement systems. This lab is developed through collaboration and funding from Alfa TKG, Japan.
